

Clean Water Tanks

Patented Flow-Thru Connection

1 1/4" Stainless Steel Tee Water Connection

100% Butyl Controlled Action Diaphragm

Comprehensive Testing

5 year limited warranty

3 in 1

Application versatility!

1. Flow-thru tank for VFD applications

2. Pipe through tank for inline applications. Flow-Thru design keeps the water fresh!

3. Regular tank for tank tee installations (please note that the Flow-Thru feature will not function when installed this way)

We took a great idea, Flow-Thru, and super-sized it!

We're introducing two new tanks from Flexcon Industries that feature the patented Flow-Thru technology to ensure the highest quality water for your systems.

These new tanks include the controlled action diaphragm that makes Flexcon tanks the industry's best. In addition, we have added a stainless steel tee with the Flow-thru design to the inlet.

This innovation actually flushes water through the tank while the system pump is running, thus ensuring that the water in the tank stays fresh.

The straight pipe through design of the FT tanks enables inline tank installation and gives the benefit of clean water, or the outlet of the tee may be plugged for a traditional tank tee type installation.

Many installers of VFD systems today want to provide more stored water but are afraid that system water will sit around in the tank for extended periods of time.

The Flow-Thru design assures that the tank water remains fresh!

Model	Diameter	Height	Volume Gallons	Shipping Weight
FT 144	21"	36.25"	44	68
FT 266	26"	44.5"	85	122
