

## INSTALLATION

### LOCATION

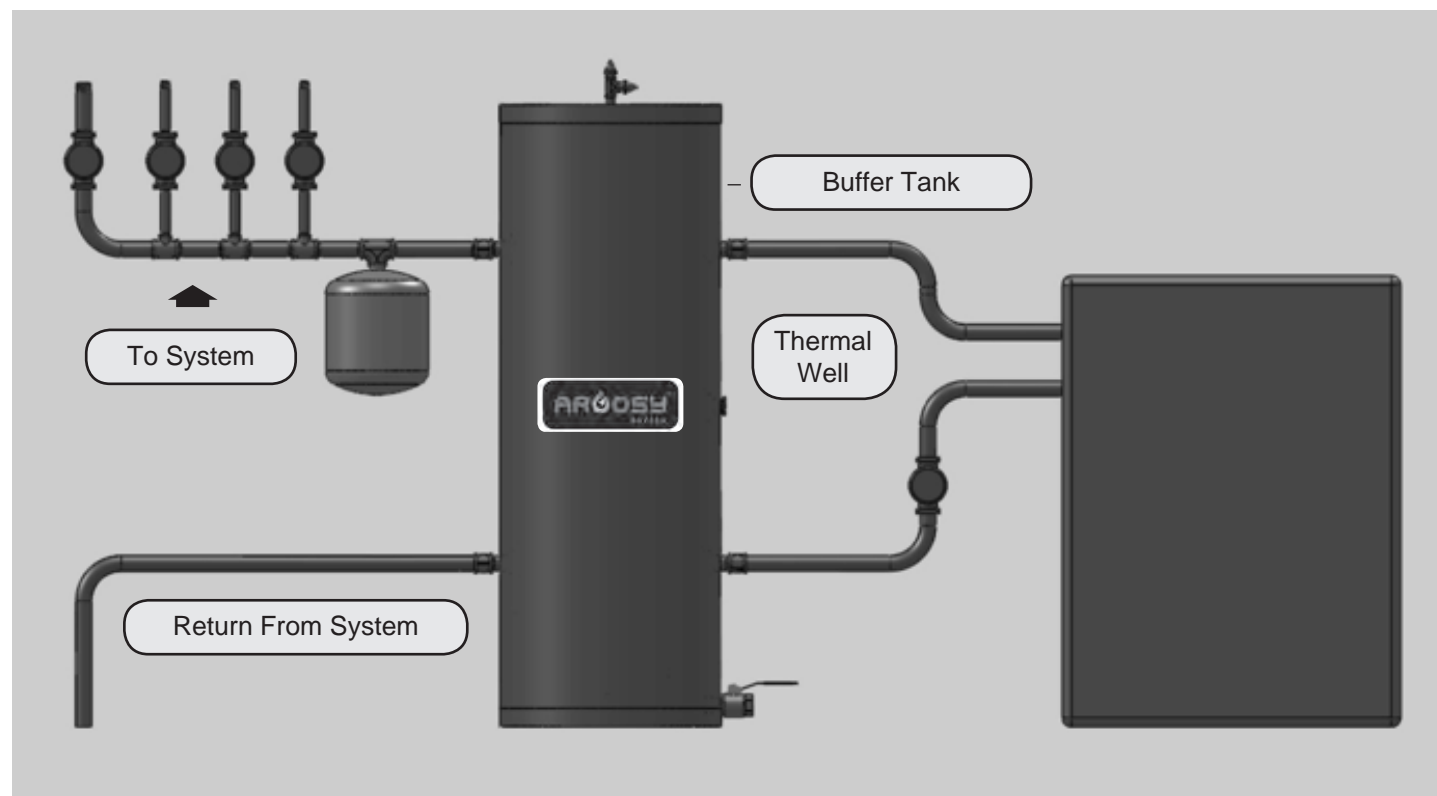

Select a location where a water leak will not cause property damage and provides adequate means for water drainage. This Buffer tank and the associated piping may in time leak. The manufacturer is not responsible for any water damage that may occur in association with the buffer tank installation. This tank has been designed to be mounted on a level surface and must be adequately supported around the entire base.

### TYPICAL INSTALLATION

When installing, please back up side port fittings and do not overtighten. Do not exceed 50 ft. lbs. when tightening side port nipples. Always install a vacuum breaker to prevent collapse of the tank due to a vacuum. Failure to install a vacuum breaker will void the warranty.

### ATTENTION

All polypropylene female pipe fittings should be pre-conditioned with Loctite 7649 primer. Loctite 567 anaerobic thread sealant should be applied to male threads before assembly. Joints should then be torqued to 30 ft-lbs.

## MAINTENANCE

Excessive draining of the Argosy Buffer tank is not recommended, as it introduces more material into the system. Routine maintenance of the system should be performed once per year, or sooner as per manufacturer recommendations.
